Faculty of Information Technologies • Software and Web Engineering • http://vitvar.com/courses/w20

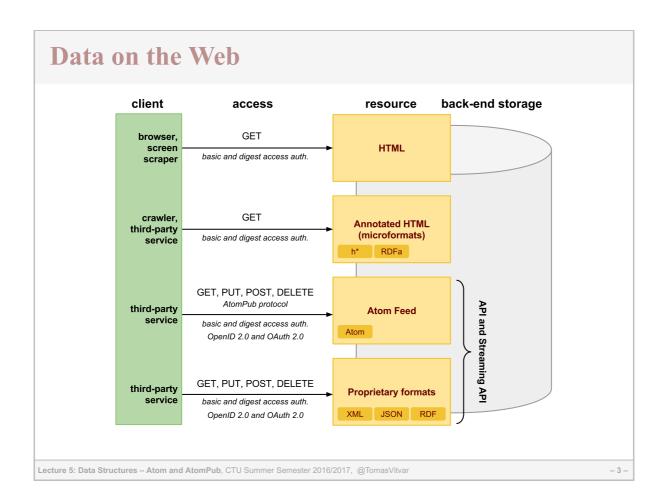

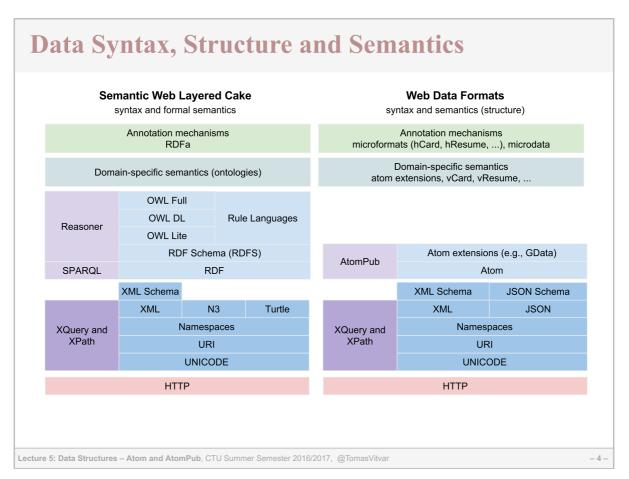

Modified: Tue Mar 21 2017, 16:07:13 Humla v0.3

## **Overview**

- Overview of Formats and Protocols
- Atom Syndication Format
- AtomPub Protocol

## **Atom Standard**

- A need for a standard syndication format
  - machine-processable Web site content
  - Alternative to RSS
    - → RSS spec does not say how to encode content, strings only ASCIIencoded, not clearly defined meaning of RSS elements, etc.
    - $\rightarrow See$
- IETF Atom Publishing Format and Protocol WG
  - RFC 4287:
  - RFC 5023:
- Adoption
  - Google: Google Data Protocol (GData)
  - Microsoft: Open Data Protocol (OData)

Lecture 5: Data Structures - Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

- 5 -

### **Overview**

- Overview of Formats and Protocols
- Atom Syndication Format
- AtomPub Protocol

Lecture 5: Data Structures – Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

- 6

# **Atom Syndication Format**

#### **Atom Feed Document**

atom:feed element (author, title, id, updated, ...)

atom:entry\* element

### **Atom Entry Document**

atom:entry element

- Two types of atom documents
  - Atom Feed Document
    - $\rightarrow$  represents an atom feed, its metadata and some or all entries associated with it.
  - Atom Entry Document
    - → represents exactly one entry, outside of context of atom feed

Lecture 5: Data Structures – Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

-7-

# **Atom Syndication Format**

Atom Feed Document Example

## **Atom Elements – Atom Feed**

### • Specification

- defined as XML information set, serialized as XML 1.0
- must be well-formed, no DTD/Schema  $\rightarrow$  no requirements to be valid.

### • atom:feed element

- (\*): zero or more occurencies repeating fields
- (?): zero or one occurence non-repeating fields
- ( ): exactly one occurence non-repeating fields

Lecture 5: Data Structures – Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

\_ 9 -

# **Atom Elements – Atom Entry**

- atom:entry element
  - (\*): zero or more occurencies repeating fields
  - (?): zero or one occurence non-repeating fields
  - ( ): exactly one occurence non-repeating fields

Lecture 5: Data Structures – Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

– 10 –

## Pointers to other information

- URI identifier
  - unique identification of things
  - feed/entry id
  - author and
    contributor (person uri)
  - generator (uri)
  - category schema (uri), term (uri)
    example:
- Unambiguous identification of things using URIs

Example category schema URI: http://example.org/dogs

id: terrier

id: foxterrier

id: dog

id: hound

id: greyhound id: basset

- Helps interoperability, can take advantage of wikipedia concepts
  - → still not very common, will improve with linked data

Lecture 5: Data Structures - Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

- 11 -

## **Atom Links**

- Links to other Atom documents
  - Atom defines simple link structure
  - type defines content type
  - rel defines relation to this resource
    - → self, alternate, related, enclosure, via
    - $\rightarrow$  standardized by IANA
- Adoption by RESTful services
  - Core for HATEOAS
  - Adopted in Link header, see
  - More details in Lecture 4 HATEOAS.

Lecture 5: Data Structures – Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

– 12 –

# **Encoding Textual Content**

### • Plain text

- simple text, must not contain child elements

### • HTML

- html text, must not contain child elements
- any markup must be escaped,
- should be possible to display it as HTML inside <div> element

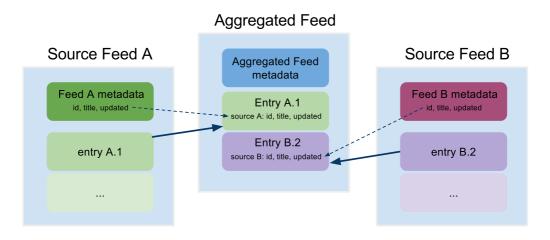

### XHTML

- the value is a single xhtml <div> element, not part of the content

Lecture 5: Data Structures - Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

\_ 13 \_

# **Aggregation**

- Atom feed may include entries from another atom feed
  - $\rightarrow$  these entries do not originally belong to this feed
- source element should contain at least:
  - → required atom feed's metadata id, title and updated
- retains information about an entry's source feed

Lecture 5: Data Structures - Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

\_ 14 -

### **Data and Time**

## • Notion of time

- Atom document is a snapshot of resource in some time
- − updated (feed, entry) − last update of the resource
- published (entry) initial creation of the first availability of the resource

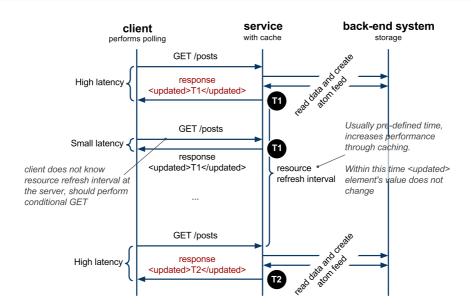

### Data format

- Examples:
  - $T-time\ delimiter$
  - **Z** − *identifies UTC time (~GMT)*
  - (+|-)hh:mm defines local time and a shift in hours and minutes from the UTC time

Lecture 5: Data Structures – Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

- 15 -

# **Polling**

- updated is the last updated time of the resource at the server
- resource refresh interval is pre-defined by the serice

Lecture 5: Data Structures - Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

– 16 -

## **Extensions**

- Possible to combine various vocabularies
  - through namespaces xmlns attribute, extensions of link.rel attribute
- Example: GData (PicasaWeb, Docs, ...)
  - combines vocabularies such as Geo location

Lecture 5: Data Structures – Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

\_ 17 \_

## **Overview**

- Overview of Formats and Protocols
- Atom Syndication Format
- AtomPub Protocol
  - Extensions

Lecture 5: Data Structures – Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

– 18 –

### **AtomPub Protocol**

- Standard protocol for manipulation of resources
  - Defines a service description by following constructs
    - $\rightarrow$  service a set of workspaces
    - $\rightarrow$  workspace a set of collections
    - $\rightarrow$  collection a set of resources
  - Defines protocol for editing, that is: creating (POST), updating (PUT), reading (GET), deleting (DELETE)
- Relation to Atom Syndication Format
  - Atom Feed and Atom Entry as resource representations
- Basis for many, such as:
  - Google Data Protocol (GData)
  - Microsoft Open Protocol (OData)

Lecture 5: Data Structures - Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

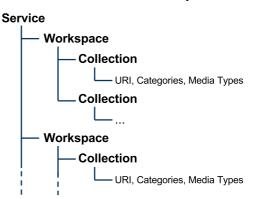

**- 19** -

### **AtomPub Elements**

### Types of Member Resources

# Entry Resource Atom Entry representation application/atom+xml;type=entry Media Link Entry Entry resource may describe Media resource, in this case Media Link Entry points to this media resource.

### **AtomPub Service Description**

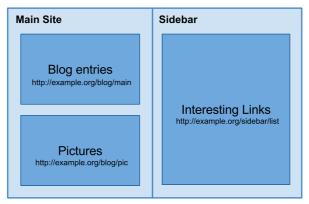

- Collection properties and definition of constraints
  - **− URI** − *id of the collection (Atom Feed)*
  - categories list of allowed categories in the collection
  - accept list of Internet media types allowed in the collection
  - URI points to an Atom Feed resource!

Lecture 5: Data Structures - Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

– 20 -

# **Example Blogging Site Description**

### Conceptual structure of a blogging site

- Workspaces
  - Main Site, Sidebar
- Collections
  - Blog entries, pictures, interesting links

Lecture 5: Data Structures – Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

- 21 -

# **Example Blogging Site Description**

## **Protocol Operations**

- Operations to manipulate resources
  - Retrieving a service document (is obvious, GET)
  - Listing collection members (filtering and projections)
  - Creating a resource (entry and media)
  - Editing a resource (is obvious, PUT and DELETE)

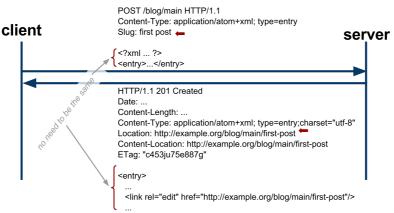

### AtomPub does not define:

- Any manipulation with
  - → service documents, workspaces and collections
- How service documents are discovered
- AtomPub may be used w/o service descriptions
  - They're good for discovering constraints on the service
  - They're not a requirement
  - For example GData does not have them

Lecture 5: Data Structures - Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

- 23 -

# **Creating Entry Resource**

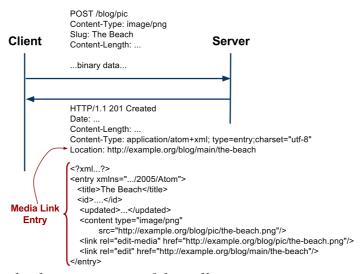

- Server checks constraints of the collection
- Server may modify member representation
  - → such as changes id, adds updated element
- if Content-Location is not equal to Location the request and response representation are not the same!
- ETag should be used for
  - $\rightarrow$  conditional GET and PUT (see lecture 4 scalability)

Lecture 5: Data Structures - Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

– 24 -

## **Creating Media Resource**

- Server checks the constraints of the collection
  - → may return 415 Unsupported Media Type if not accapted
- Media Link Entry is an Entry resource that describes metadata about media resource (such as a picture)

Lecture 5: Data Structures - Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

- 25 -

# **Listing Collection**

- Must provide representation in Atom Feed
- Contains list of Atom Entry elements
  - must have link with attribute edit
  - must have edited, order of entries by this date
    - $\rightarrow$  is not the same as Last-Modified header
- Entries in collection are not full representations
  - clients should retrieve them using GET on entry URI
- To limit amount of entries
  - links with semantics for navigation through the whole list

Lecture 5: Data Structures - Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

- 26 -

## **Overview**

- Overview of Formats and Protocols
- Atom Syndication Format
- AtomPub Protocol
  - Extensions

Lecture 5: Data Structures – Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

\_ 27 \_

## **Extensions**

- OpenSearch
  - Specification:
  - Search service description and search results
- Google Data Protocol
  - Filtering, partial response and partial update
  - Entity tag attribute for <feed> and <entry> elements
  - HTTP methods overriding

Lecture 5: Data Structures – Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

– 28 –

# **OpenSearch**

- Open Search Specification
  - Open Search Description Document (OSDD)
    - $\rightarrow$  description of a search service
  - OpenSearch Response Document
    - → Standard description of search results by search services
    - → extension of syndication formats, RSS and Atom

## Adoption

- Browsers such as IE, Google Chrome search engines you can use to search various sites.
- APIs such as Bing API, Google Docs, etc. description of search results.

Lecture 5: Data Structures - Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

\_ 29 -

# **OpenSearch Description Document**

- Example:
  - searchTerms is a free text

Lecture 5: Data Structures – Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

\_ 30 -

# **OpenSearch Response Document**

- Example:
  - Result in Atom format of a search query

Lecture 5: Data Structures – Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

\_ 31 -

# **GData Protocol: Advanced Search Query**

- OpenSearch does not specify syntax for search query
  - It can be anything, free text
  - GData Protocol further allows for filtering and projection
- Filtering
  - Fine-grained conditions based on values of various elements
    - $\rightarrow$  such as author, category, max-results, min and max of published and updated elements.
- Partial Response (~Projection)
  - Which elements of an entry should appear in the search result
  - A language based on XPath syntax (subset of a valid XPath expression)

Lecture 5: Data Structures – Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

- 32

# **GData Protocol: Partial Update**

### PATCH HTTP Method

- IETF specification, see
- Add, modify or delete selected elements of an entry

### Examples

- To delete a description element and add a new title element
- gd:fields uses partial response syntax

### Rules

- Fields not already present are added
- Non-repeating fields already present are updated
- Repeating fields already present are appended

Lecture 5: Data Structures - Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

- 33

# **GData Protocol: Entity Tags**

### • Resource Versioning

- Conditional GET and PUT (concurrencyl control)
  - $\rightarrow$  See Lecture 4 scalability
- Etgas on atom and entry elements

## Example

It is possible to do a conditional GET/PUT on the entry by using the ETag
 "CUUEQX47eCp7ImA9WxRVEkQ."

Lecture 5: Data Structures – Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

– 34 –

# **GData Protocol: HTTP Methods Overriding**

- Firewall restrictions
  - Some firewall configurations do not allow to send HTTP request other than GET and POST
- HTTP methods overriding through POST
- Example

Lecture 5: Data Structures - Atom and AtomPub, CTU Summer Semester 2016/2017, @TomasVitvar

- 35 -
